

Having an ultrasound scan after an abdominal endovascular aneurysm repair

Vascular Studies Unit

Information for Patients

Produced: May 2021

Review: May 2024

Leaflet number: 1191 Version: 1

Introduction

Please read your appointment letter carefully to check the time, date and which hospital you must go to for your appointment. This leaflet tells you about your scan. Please read it carefully as it contains important information and instructions.

You have had an endovascular aneurysm repair (EVAR) of the main blood vessel in your tummy (abdominal aorta), because of swelling in this artery, using a device called a stent. You have been referred by your consultant for an ultrasound scan to check for any problems.

What is a vascular ultrasound scan?

Your body's network of blood vessels is called the vascular system, which includes all of your veins and arteries.

A vascular ultrasound scan is a painless examination of the blood vessels using sound waves which are beyond our normal range of hearing (ultrasound). The ultrasound probe (transducer) is the part of the machine that is in contact with your skin during the scan. The transducer produces the sound waves that build up pictures of the blood vessels and stent which can be seen on a screen.

The machine also uses something called the Doppler effect to measure blood flow through the blood vessels, which at times you may hear as a 'whoosh-whoosh' sound. The blood flow is also seen on screen as colour or waveforms.

There are no known side effects from having an ultrasound scan.

**Health information and support is available at www.nhs.uk
or call 111 for non-emergency medical advice**

Why do I need an ultrasound scan after my EVAR procedure?

An ultrasound scan allows us to check blood is flowing through the stent and if there are any other problems.

What happens during the scan?

You will be taken into the room where the scan will be explained to you and you may ask any questions that you have about the scan. You will be asked to remove clothing from around your tummy area and asked to lie down on the couch.

The scan will take place in a slightly darkened room so we can see the pictures clearly on the screen.

A water-based gel will be placed on your tummy and the ultrasound probe will be passed over this area with some pressure. The scan is not painful, but some pressure is needed to obtain a good picture.

How do I prepare for the scan?

There is no special preparation for the scan. You may eat and drink as normal.

It will help to wear loose fitting clothing which can easily be removed or moved away from the area to be scanned.

Hearing aids and pacemakers are not affected by the scan.

Who will be doing the scan?

A specialist in vascular ultrasound (clinical vascular scientist) will carry out the scan.

As we are a teaching hospital, students may also be in the room. If you do not want any students to be in the room during your appointment, please let us know.

How long will it take?

This will vary for each patient from around 10 to 20 minutes.

What happens after the scan?

The gel can be wiped off and you can get dressed. You will need to wait to see the vascular specialist nurse for the result and any follow-up care.

You can eat and drink normally after the scan.

How do I get the results?

The result may be discussed with you during the scan and will be reported for the nurse to discuss with you afterwards in clinic.

Can I bring a friend or relative with me to my appointment?

You may wish to bring a friend or relative with you, or to take you home from the Vascular Studies Unit. This may be useful if you do not speak or understand English very well or if you have any special needs. However, they may not always be allowed into the test room.

Special requirements

If you have any special needs relating to a disability or need language or communication support, please call the telephone number given in your appointment letter as soon as possible so we can make appropriate arrangements to help support you.

Shops and refreshments

Refreshments including hot/ cold drinks and snacks are available in the hospital. Please ask a member of staff for directions.
